

Manual Test Fixtures MA 21xx

RF Replacement Kits for the Manual Test Fixtures series MA 2111 and MA 2112

As an enhancement, we provide **RF Replacements Kits** for the highest demands, which were designed especially for the standardized series MA 2111 and MA 2112. As usual, also these RF Replacements Kits can be inserted into the matching Base Unit without the use of tools.

Contacting is carried out with INGUN RF Probes (HFS) or with INGUN High-current Probes (HSS). The guidance of the wiring connections from the RF Cover to the outside is carried out by means of ceramic feed-through capacitors and ferrite beads as well as co-axial wiring connections for RF signals. The design layout is done at INGUN.
